

KtLint

Explain...

Captain, I
found a way to
improve our
Code quality...

ktlint

An anti-bikeshedding Kotlin linter with built-in formatter.

Take a look
sir!

Put Ktlint in the
CI/CD pipeline, to
check their code.

It is an order!

First, I will add Ktlint plugin into the project:

[versions]

```
material = "1.9.0"  
ktlint_plugin = "11.5.1"  
ksp = "1.8.10-1.0.9"
```

[plugins]

```
ktlint = { id = "org.jlleitschuh.gradle.ktlint", version.ref = "ktlint_plugin" }
```

`gradle/ -> libs.versions.toml` 

Applying the new
plugin for all
modules...

```
plugins {  
    alias(libs.plugins.ksp) apply false  
    alias(libs.plugins.hilt) apply false  
    alias(libs.plugins.ktlint)  
}
```

```
val ktLintPluginId: String = libs.plugins.ktlint.get().pluginId  
  
subprojects {  
    apply(plugin = ktLintPluginId) // Version should be inherited from parent  
  
    // Accessing the 'PluginContainer' in order to use 'whenPluginAdded' function  
    project.plugins.configure(project = project)  
  
    // Optionally configure plugin  
    configure<org.jlleitschuh.gradle.ktlint.KtlintExtension> {  
        debug.set(true)  
    }  
}
```

build.gradle.kts (project level) 

I have permission to
send this to the
main branch

Yep, you
have!

Updating the CI/CD
to run ktlint task:

Config	
Optional path to the Gradle build file to use	
<input type="text" value="\$GRADLE_BUILD_FILE_PATH"/>	
Gradle task to run	REQUIRED
<input type="text" value="ktlintCheck"/>	
gradlew file path	REQUIRED
<input type="text" value="\$GRADLEW_PATH"/>	

Peralta, your PR is failing!

What?!
It is impossible!

Yep. It is failing Peralta.
You need to format your
code using `ktlint`, and send
it again!

Terminal Local × + ▾

You have not agreed to the Xcode license agreeeme

→ src git:(main) ./gradlew ktlintFormat

Ty Sarge!
